BRIEF DESCRIPTION

This never-used Hosokawa Micron Powder Jet Mill can grind any powder that is crystalline or friable down to micron size level. The mill is lined with tungsten carbide or silicon carbide ceramics with MOH hardness of 9.6 with diamond being 10

The jet mill has many applications beyond size reduction. One of the important secondary uses for jet mills is to blend powders. Two or more streams of materials may be fed to the jet mill at the same time resulting in a perfect homogeneous blend of output.
