

300 TPD EDIBLE OIL REFINERY FOR SALE

Capacity

300 TPD

Year built

2007

Year shut down

2009

Feedstock

Crude vegetable oils, extracted from soya, palm, sunflower, canola and other seeds.

Products

Edible vegetable oils

Major Equipment

- Degumming unit
- Neutralising unit
- Bleaching unit
- Deodorising unit

BRIEF PROCESS DESCRIPTION

- Degumming reduces mainly the phosphatides and metals content of the crude oil by mixing it with an acid and water.
- Neutralising: Although most oils can now be physically refined, some still require alkali - also called chemical neutralising before the conventional bleaching and deodorising steps.
- Bleaching: The main purpose of bleaching is to remove a major part of the colouring pigments by absorption on bleaching earth. This earth also retains other detrimental components.
- Deodorising: A new generation high efficiency continuous deodoriser, highly appreciated by very demanding key processors all over the world for the reliability and product quality.
